## Ultrasonic sensor simulation in Wokwi

### Question :

Write a code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100cms send an “Alert” to IBM cloud and display in the device recent events.

### Code:

```
#include <WiFi.h> #include <PubSubClient.h> void callback(char*
subscribetopic, byte* payload, unsigned int payloadLength);
//-----credentials of IBM Accounts-----
#define ORG "kotoq5"//IBM ORGANITION ID
#define DEVICE_TYPE "ESP32"//Device type mentioned in ibm watson IOT Platform
#define DEVICE_ID "12345"//Device ID mentioned in ibm watson IOT Platform
#define TOKEN "12345678" //Token String data3; char server[] =
ORG      ".messaging.internetofthings.ibmcloud.com";      char
publishTopic[]      =      "iot-2/evt/Data/fmt/json";      char
subscribetopic[]      =      "iot-2/cmd/test/fmt/String";      char
authMethod[] = "use-token-auth";
```

```
char token[] = TOKEN;
char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;
WiFiClient wifiClient;
PubSubClient client(server, 1883, callback ,wifiClient);
const int trigPin = 5; const int echoPin = 18; #define
SOUND_SPEED 0.034 long duration; float distance; void
setup() { Serial.begin(115200); pinMode(trigPin,
OUTPUT); pinMode(echoPin, INPUT); wificonnect();
mqttconnect(); } void loop() { digitalWrite(trigPin,
LOW); delayMicroseconds(2); digitalWrite(trigPin,
HIGH); delayMicroseconds(10); digitalWrite(trigPin,
LOW); duration = pulseIn(echoPin, HIGH); distance =
duration * SOUND_SPEED/2;
Serial.print("Distance (cm): ");
Serial.println(distance);
if(distance<100)
{
Serial.println("ALERT!!");
delay(1000);
}
```

```

PublishData(distance)
; delay(1000); if
(!client.loop()) {
mqttconnect();
} } delay(1000); } void
PublishData(float dist) {
mqttconnect();
String payload = "{\"Distance\":\""; payload += dist; payload
+= ", \"ALERT!!\":\"\" \"Distance less than 100cms\""; payload
+= "}";
Serial.print("Sending          payload:          ");
Serial.println(payload);

if (client.publish(publishTopic, (char*) payload.c_str())) {
Serial.println("Publish ok");
} else {
Serial.println("Publish failed");
} } void mqttconnect() { if
(!client.connected()) {
Serial.print("Reconnecting      client      to      ");
Serial.println(server);
while (!client.connect(clientId, authMethod, token))
{ Serial.print("."); delay(500);
}
}
initManagedDevice();
Serial.println();
} }
void wificonnect()
{
Serial.println(); Serial.print("Connecting to ");
WiFi.begin("Wokwi-GUEST", "", 6); while (WiFi.status() !=
WL_CONNECTED) { delay(500);
Serial.print(".");
}
Serial.println(""); Serial.println("WiFi connected");
Serial.println("IP address: ");

```

```

Serial.println(WiFi.localIP());
}
void initManagedDevice() { if
(client.subscribe(subscribetopic)) {
Serial.println((subscribetopic)); Serial.println("subscribe to
cmd OK");
} else {
Serial.println("subscribe to cmd FAILED");
} } void callback(char* subscribetopic, byte* payload, unsigned int
payloadLength) {
Serial.print("callback invoked for topic: ");
Serial.println(subscribetopic); for (int i =
0; i < payloadLength; i++) {
//Serial.print((char)payload[i]); data3 +=
(char)payload[i];
}
Serial.println("data: "+ data3);
data3="";
}

```

Distance (cm): 399.96
Distance (cm): 399.94
Distance (cm): 399.98
Distance (cm): 399.94
Distance (cm): 399.92
Distance (cm): 399.94
```

## IBM cloud output:

The screenshot displays the IBM Cloud IoT Platform interface. On the left is a dark sidebar with icons for various functions. The main area has a top navigation bar with tabs: 'Browse', 'Action', 'Device Types', and 'Interfaces'. To the right of these tabs is a blue button labeled 'Add Device' with a plus icon. Below the navigation bar, there are tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is currently selected. Below this tab, a message states: 'The recent events listed show the live stream of data that is coming and going from this device.' Underneath this message is a table with four columns: 'Event', 'Value', 'Format', and 'Last Received'. The table contains four rows of data, all with 'event\_1' in the 'Event' column and 'a few seconds ago' in the 'Last Received' column. The 'Value' column contains JSON strings: '{"distance":7,"Alert":"Distance less than 10"}', '{"distance":9,"Alert":"Distance less than 10"}', '{"distance":8,"Alert":"Distance less than 10"}', and '{"distance":9,"Alert":"Distance less than 10"}'. The 'Format' column for all rows is 'json'.

Event	Value	Format	Last Received
event_1	{"distance":7,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":8,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
